## **The Allstate Corporation**

### **Investor Supplement Second Quarter 2020**

The condensed consolidated financial statements and financial exhibits included herein are unaudited. These condensed consolidated financial statements and exhibits should be read in conjunction with the consolidated financial statements and notes thereto included in the most recent Annual Report on Form 10-K and Quarterly Reports on Form 10-Q. The results of operations for interim periods should not be considered indicative of results to be expected for the full year.

Measures used in these financial statements and exhibits that are not based on generally accepted accounting principles ("non-GAAP") are denoted with an asterisk (\*). These measures are defined on the pages "Definitions of Non-GAAP Measures" and are reconciled to the most directly comparable generally accepted accounting principles ("GAAP") measure herein.

(1) Property and casualty insurance premiums are reported in the Property-Liability and Service Businesses results and include auto, homeowners, other personal lines and commercial lines insurance products, including shared economy, as well as consumer product protection plans, roadside assistance, and finance and insurance products.

(2) Life premiums and contract charges are reported in the Allstate Life, Allstate Benefits and Allstate Annuities results and include life insurance, voluntary accident and health insurance, and annuity products.

(3) Other revenue primarily represents fees collected from policyholders relating to premium installment payments, commissions on sales of non-proprietary products, sales of identity protection services, fee-based services and other revenue transactions.

(4) In accordance with GAAP, the quarter and year-to-date per share amounts are calculated discretely. Therefore, the sum of each quarter may not equal the year-to-date amount.

Allstate independent agencies <sup>(6)</sup>	4,400	3,800	3,400	3,300	3,200	3,000
Encompass independent agencies	3,000	2,900	2,800	2,800	2,800	2,700

(1) Policy counts are based on items rather than customers.

- A multi-car customer would generate multiple item (policy) counts, even if all cars were insured under one policy.
- Commercial lines PIF for shared economy agreements typically reflect contracts that cover multiple drivers as opposed to individual drivers.
- Non-proprietary products offered by Ivtantage (insurance agency) and Answer Financial (independent insurance agency) are not included.
- Allstate Roadside Services reflects memberships in force and do not include their wholesale partners as the customer relationship is managed by the wholesale partner.
- Allstate Dealer Services reflects service contracts and other products sold in conjunction with auto lending and vehicle sales transactions and do not include their third party administrators ("TPAs") as the customer relationship is managed by the TPAs.
- Allstate Protection Plans represents active consumer product protection plans.
- Allstate Identity Protection reflects individual customer counts for identity protection products.
- Allstate Life insurance policies and Allstate Annuities in force reflect the number of contracts in force excluding sold blocks of business that remain on the balance sheet due to the dispositions of the business being effected through reinsurance arrangements.
- Allstate Benefits reflects certificate counts as opposed to group counts.

(2) As of June 30, 2020, total customer counts included free services provided to 203 thousand Allstate Identity Protection subscribers for the remainder of 2020 as part of the continued support during the Coronavirus pandemic.

(3) Rounded to the nearest hundred.

(4) Total Allstate agencies represents exclusive Allstate agencies and financial representatives in the United States and employee producers in Canada.

(5) Represents employees of Allstate agencies who are licensed to sell Allstate products.

(6) Includes 948 and 1,102 engaged Allstate independent agencies ("AIAs") as of June 30, 2020 and December 31, 2019, respectively. Engaged AIAs, as currently determined, include those that achieve a minimum number of new policies written.

(2) There are no premiums written for Arity or Allstate Identity Protection, which are part of the Service Businesses segment. Revenues for Arity and Allstate Identity Protection are primarily reported as intersegment service fees and other revenue.

(3) Represents non-proprietary premiums under management as of the end of the period related to personal and commercial line products offered by Ivantage when an Allstate product is not available. Fees for the three months ended June 30, 2020, March 31, 2020, December 31, 2019, September 30, 2019, June 30, 2019 and March 31, 2019 were \$44 million, \$39 million, \$41 million, \$45 million, \$45 million and \$37 million, respectively.

(4) Represents non-proprietary premiums written for the period. Commissions earned for the three and six months ended June 30, 2020 were \$17 million and \$35 million, respectively.

<sup>(1)</sup> Rate changes include changes approved based on our net cost of reinsurance. These rate changes do not reflect initial rates filed for insurance subsidiaries initially writing business. Based on historical premiums written in 50 states, the District of Columbia and Canadian provinces, rate changes approved for Allstate brand, Esurance brand and Encompass brand for the three month period ending June 30, 2020 are estimated to total \$42 million. Rate changes do not include rating plan enhancements, including the introduction of discounts and surcharges that result in no change in the overall rate level in a location.

<sup>(2)</sup> Impacts of Allstate brand auto effective rate changes as a percentage of total brand prior year-end premiums written were 0.2%, 0.4%, 0.9%, 0.4%, 0.9% and 0.6% for the three months ended June 30, 2020, March 31, 2020, December 31, 2019, September 30, 2019, June 30, 2019 and March 31, 2019, respectively. Rate changes are included in the effective calculations in the period the rate change is effective for renewal contracts.

<sup>(3)</sup> Allstate brand auto rate changes were 1.8%, 2.6%, 2.7%, 2.2%, 1.7% and 1.4% for the trailing twelve months ended June 30, 2020, March 31, 2020, December 31, 2019, September 30, 2019, June 30, 2019 and March 31, 2019, respectively.

<sup>(4)</sup> Impacts of Allstate brand homeowners effective rate changes as a percentage of total brand prior year-end premiums written were 0.7%, 1.2%, 0.2%, 0.2%, 0.8% and 2.3% for the three months ended June 30, 2020, March 31, 2020, December 31, 2019, September 30, 2019, June 30, 2019 and March 31, 2019, respectively.

<sup>(5)</sup> Allstate brand operates in 50 states, the District of Columbia, and 5 Canadian provinces. Esurance brand operates in 43 states. Encompass operates in 40 states and the District of Columbia.

<sup>(6)</sup> Represents the impact in the states, the District of Columbia and Canadian provinces where rate changes were approved during the period as a percentage of total brand prior year-end premiums written.

<sup>(7)</sup> Represents the impact in the states, the District of Columbia and Canadian provinces where rate changes were approved during the period as a percentage of its respective total prior year-end premiums written in those same locations.

Paid claim severity <sup>(9)</sup>	9.4	16.1	23.2	13.2	11.7	0.5	12.8	6.2

(1) Statistics presented for Allstate brand exclude excess and surplus lines.

(2) New issued applications: Item counts of automobiles or homeowners insurance applications for insurance policies that were issued during the period, regardless of whether the customer was previously insured by another Allstate Protection brand. Allstate brand includes automobiles added by existing customers when they exceed the number allowed (currently 10) on a policy.

(3) Average premium - gross written: Gross premiums written divided by issued item count. Gross premiums written include the impacts from discounts, surcharges and ceded reinsurance premiums and exclude the impacts from mid-term premium adjustments and premium refund accruals. Average premiums represent the appropriate policy term for each line, which is 6 months for auto and 12 months for homeowners.

(4) Average premium - net earned: Earned premium divided by average policies in force for the period. Earned premium includes the impacts from mid-term premium adjustments and ceded reinsurance, but does not include impacts of premium refund accruals. Average premiums represent the appropriate policy term for each line, which is 6 months for auto and 12 months for homeowners.

(5) Annualized average premium is calculated by annualizing net earned premium reported in the quarter and year-to-date divided by policies in force at quarter end.

(6) Average underlying loss (incurred pure premium) and expense is calculated as the underlying combined ratio multiplied by the annualized average premium.

(7) Renewal ratio: Renewal policies issued during the period, based on contract effective dates, divided by the total policies issued 6 months prior for auto or 12 months prior for homeowners.

(8) Paid claim frequency is calculated as annualized notice counts closed with payment in the period divided by the average of policies in force with the applicable coverage during the period. Gross claim frequency is calculated as annualized notice counts received in the period divided by the average of policies in force with the applicable coverage during the period. Gross claim frequency includes all actual notice counts, regardless of their current status (open or closed) or their ultimate disposition (closed with a payment or closed without payment). Frequency statistics exclude counts associated with catastrophe events. The percent change in paid or gross claim frequency is calculated as the amount of increase or decrease in the paid or gross claim frequency in the current period compared to the same period in the prior year; divided by the prior year paid or gross claim frequency.

(9) Paid claim severity is calculated by dividing the sum of paid losses and loss expenses by claims closed with a payment during the period. The percent change in paid claim severity is calculated as the amount of increase or decrease in paid claim severity in the current period compared to the same period in the prior year; divided by the prior year paid claims severity.

(1) Other includes other mass torts, workers' compensation, commercial and other.

(2) The 3-year survival ratio for the combined asbestos, environmental and other claims was 11.9, 11.1, 10.1, 9.2, 9.2 and 10.6 for the annualized six months of 2020 and twelve months ended 2019, 2018, 2017, 2016 and 2015, respectively. The 3-year survival ratio is calculated by taking the ending reserves divided by average net payments made during the 3-year period. For the annualized six months calculation, average net payments are calculated using the annualized 2020 net payments plus the preceding two-year periods.

(1) Benefit ratio is contract benefits divided by premiums and contract charges.

(2) Operating expense ratio is operating costs and expenses divided by premiums and contract charges.

(3) New annualized premium sales reflects annualized premiums at initial customer enrollment (including new accounts and new employees or policies of existing accounts). A significant portion of Allstate Benefits business is seasonally written in the fourth quarter during many clients' annual employee benefits enrollment.

(4) Premium amount paid annually for all active policies, which have not been cancelled.

(5) Includes \$41 million, pre-tax, write-off of capitalized software costs associated with a billing system.

Immediate annuities	(7.1) %	(3.7) %	(1.1) %	0.3 %	0.5 %	0.4 %

(1) Net income applicable to common shareholders and adjusted net income reflect a trailing twelve-month period.

(2) Includes a \$69 million Tax Legislation benefit for the periods ended June 30, 2019 and March 31, 2019.

(3) Average equity and average adjusted equity are determined using a two-point average, with the beginning and ending equity and adjusted equity, respectively, for the twelve-month period as data points.

Fixed income securities portfolio duration (in years) <sup>(4)</sup>	5.08	4.89	6.77	5.21	4.94	3.21	5.23

<sup>(1)</sup> As of June 30, 2020, equity securities include \$1.36 billion of investments in exchange traded and mutual funds whose underlying investments are fixed income securities.

<sup>(2)</sup> As of June 30, 2020, we have commitments to invest additional amounts in limited partnership interests totaling \$2.73 billion.

<sup>(3)</sup> Due to the adoption of the measurement of credit losses on financial instruments accounting standard on January 1, 2020, credit losses for fixed income securities are recorded as an allowance.

<sup>(4)</sup> Duration measures the price sensitivity of assets and liabilities to changes in interest rates.

<sup>(1)</sup> Income from equity method of accounting LP is generally recognized on a three-month delay due to the availability of the related financial statements from investees.

<sup>(2)</sup> Comprise fixed income securities, mortgage loans, short-term investments, and other investments including bank and agent loans and derivatives.

<sup>(3)</sup> Comprise limited partnership interests and other alternative investments, including real estate investments classified as other investments.

<sup>(4)</sup> Quarterly pre-tax yield is calculated as annualized quarterly investment income, before investment expense divided by the average of the ending investment balances of the current and prior quarter. Year-to-date pre-tax yield is calculated as annualized year-to-date investment income, before investment expense divided by the average of investment balances at the beginning of the year and the end of each quarter during the year. For the purposes of the pre-tax yield calculation, income for directly held real estate and other consolidated investments is net of investee level expenses (asset level operating expenses reported in investment expense). Beginning January 1, 2020, depreciation previously included in investee level expenses is reported as realized capital gains or losses. Fixed income securities investment balances exclude unrealized capital gains and losses. Equity securities investment balances use cost in the calculation.

<sup>(5)</sup> Beginning January 1, 2020, depreciation previously included in investee level expenses is reported as realized capital gains or losses.

<sup>(6)</sup> Due to the adoption of the measurement of credit losses on financial instruments accounting standard on January 1, 2020, realized capital losses previously reported as other-than-temporary impairment write-downs are presented as credit losses.

<sup>(7)</sup> Total return on investment portfolio is calculated from GAAP results, including the total of net investment income, realized capital gains and losses, the change in unrealized net capital gains and losses, and the change in the difference between fair value and carrying value of mortgage loans, bank loans and agent loans divided by the average fair value balances.

<sup>(8)</sup> Average investment balances for the quarter are calculated as the average of the current and prior quarter investment balances. For purposes of the average investment balances calculation, unrealized capital gains and losses on fixed income securities are excluded and equity securities investment balances are at cost.

(1) Market-based strategy seeks to deliver predictable earnings aligned to business needs and take advantage of short-term opportunities primarily through public and private fixed income investments and public equity securities.

(2) Equity securities include investments in exchange traded and mutual funds whose underlying investments are fixed income securities.

(3) Market-based investments include publicly traded equity securities classified as limited partnerships.

(4) When calculating the pre-tax yields, investee level expenses are netted against income for directly held real estate and other consolidated investments.

(5) Due to the adoption of the measurement of credit losses on financial instruments accounting standard on January 1, 2020, realized capital losses previously reported as other-than-temporary impairment write-downs are presented as credit losses.

(6) Performance-based strategy seeks to deliver attractive risk-adjusted returns and supplement market risk with idiosyncratic risk primarily through investments in private equity and real estate.

3 Year	7.5	10.4 <sup>(3)</sup>	11.7	12.7	12.7	11.6		
1 Year	(2.2)	6.5 <sup>(3)</sup>	7.6	9.7	9.5	6.7		

<sup>(1)</sup> Beginning January 1, 2020, depreciation previously included in investee level expenses is reported as realized capital gains or losses.

<sup>(2)</sup> The internal rate of return ("IRR") is one of the measures we use to evaluate the performance of these investments. The IRR represents the rate of return on the investments considering the cash flows paid and received and, until the investment is fully liquidated, the estimated value of investment holdings at the end of the measurement period. The calculated IRR for any measurement period is highly influenced by the values of the portfolio at the beginning and end of the period, which reflect the estimated fair values of the investments as of such dates. As a result, the IRR can vary significantly for different measurement periods based on macroeconomic or other events that impact the estimated beginning or ending portfolio value, such as the global financial crisis. Our IRR calculation method may differ from those used by other investors. The timing of the recognition of income in the financial statements may differ significantly from the cash distributions and changes in the value of these investments.

<sup>(3)</sup> For the three months ended March 31, 2020, IRR excludes decreases of \$247 million that were recorded in consideration of intervening events. Where information was available to enable updated estimates, we recognized current period declines in the value of limited partnership interests. This included updating publicly traded investments held within limited partnerships to their March 31, 2020 values, which reduced income \$52 million. Additionally, \$195 million of valuation increases reported in the fourth quarter 2019 partnership financial statements were excluded from income considering the equity market decline in March.

## Definitions of Non-GAAP Measures

We believe that investors' understanding of Allstate's performance is enhanced by our disclosure of the following non-GAAP measures. Our methods for calculating these measures may differ from those used by other companies and therefore comparability may be limited.

**Adjusted net income** is net income applicable to common shareholders, excluding:

- realized capital gains and losses, after-tax, except for periodic settlements and accruals on non-hedge derivative instruments, which are reported with realized capital gains and losses but included in adjusted net income,
- pension and other postretirement rereasurement gains and losses, after-tax,
- valuation changes on embedded derivatives not hedged, after-tax,
- amortization of deferred policy acquisition costs ("DAC") and deferred sales inducements ("DSI"), to the extent they resulted from the recognition of certain realized capital gains and losses or valuation changes on embedded derivatives not hedged, after-tax,
- business combination expenses and the amortization or impairment of purchased intangibles, after-tax,
- gain (loss) on disposition of operations, after-tax, and
- adjustments for other significant non-recurring, infrequent or unusual items, when (a) the nature of the charge or gain is such that it is reasonably unlikely to recur within two years, or (b) there has been no similar charge or gain within the prior two years.

Net income applicable to common shareholders is the GAAP measure that is most directly comparable to adjusted net income. We use adjusted net income as an important measure to evaluate our results of operations. We believe that the measure provides investors with a valuable measure of the Company's ongoing performance because it reveals trends in our insurance and financial service business that may be obscured by the net effect of realized capital gains and losses, pension and other postretirement rereasurement gains and losses, valuation changes on embedded derivatives not hedged, business combination expenses and the amortization or impairment of purchased intangibles, gain (loss) on disposition of operations and adjustments for other significant non-recurring, infrequent or unusual items. Realized capital gains and losses, pension and other postretirement rereasurement gains and losses, valuation changes on embedded derivatives not hedged and gain (loss) on disposition of operations may vary significantly between periods and are generally driven by business decisions and external economic developments such as capital market conditions, the timing of which is unrelated to the insurance underwriting process. Consistent with our intent to protect results or earn additional income, adjusted net income includes periodic settlements and accruals on certain derivative instruments that are reported in realized capital gains and losses because they do not qualify for hedge accounting or are not designated as hedges for accounting purposes. These instruments are used for economic hedges and to replicate fixed income securities, and by including them in adjusted net income, we are appropriately reflecting their trends in our performance and in a manner consistent with the economically hedged investments, product attributes (e.g. net investment income and interest credited to contractholder funds) or replicated investments. Business combination expenses are excluded because they are non-recurring in nature and the amortization or impairment of purchased intangibles is excluded because it relates to the acquisition purchase price and is not indicative of our underlying business results or trends. Non-recurring items are excluded because, by their nature, they are not indicative of our business or economic trends. Accordingly, adjusted net income excludes the effect of items that tend to be highly variable from period to period and highlights the results from ongoing operations and the underlying profitability of our business. A byproduct of excluding these items to determine adjusted net income is the transparency and understanding of their significance to net income variability and profitability while recognizing these or similar items may recur in subsequent periods. Adjusted net income is used by management along with the other components of net income applicable to common shareholders to assess our performance. We use adjusted measures of adjusted net income in incentive compensation. Therefore, we believe it is useful for investors to evaluate net income applicable to common shareholders, adjusted net income and their components separately and in the aggregate when reviewing and evaluating our performance. We note that investors, financial analysts, financial and business media organizations and rating agencies utilize adjusted net income results in their evaluation of our and our industry's financial performance and in their investment decisions, recommendations and communications as it represents a reliable, representative and consistent measurement of the industry and the Company and management's performance. We note that the price to earnings multiple commonly used by insurance investors as a forward-looking valuation technique uses adjusted net income as the denominator. Adjusted net income should not be considered a substitute for net income applicable to common shareholders and does not reflect the overall profitability of our business. A reconciliation of adjusted net income to net income applicable to common shareholders is provided in the schedule, "Contribution to Income".

**Combined ratio excluding the effect of catastrophes, prior year reserve reestimates and amortization or impairment of purchased intangibles ("underlying combined ratio")** is a non-GAAP ratio, which is computed as the difference between four GAAP operating ratios: the combined ratio, the effect of catastrophes on the combined ratio, the effect of prior year non-catastrophe reserve reestimates on the combined ratio, and the effect of amortization or impairment of purchased intangibles on the combined ratio. We believe that this ratio is useful to investors and it is used by management to reveal the trends in our Property-Liability business that may be obscured by catastrophe losses, prior year reserve reestimates and amortization or impairment of purchased intangibles. Catastrophe losses cause our loss trends to vary significantly between periods as a result of their incidence of occurrence and magnitude, and can have a significant impact on the combined ratio. Prior year reserve reestimates are caused by unexpected loss development on historical reserves which could increase or decrease current year income. Amortization or impairment of purchased intangibles relates to the acquisition purchase price and is not indicative of our underlying insurance business results or trends. We believe it is useful for investors to evaluate these components separately and in the aggregate when reviewing our underwriting performance. We also provide it to facilitate a comparison to our outlook on the underlying combined ratio. The most directly comparable GAAP measure is the combined ratio. The underlying combined ratio should not be considered a substitute for the combined ratio and does not reflect the overall underwriting profitability of our business. A reconciliation of the underlying combined ratio to combined ratio is provided in the schedules "Property-Liability Results", "Allstate Brand Profitability Measures", "Esurance Brand Profitability Measures and Statistics", "Encompass Brand Profitability Measures and Statistics", "Auto Profitability Measures by Brand", "Homeowners Profitability Measures by Brand", "Other Personal Lines Profitability Measures by Brand" and "Commercial Lines Profitability Measures".

**Average underlying loss (incurred pure premium) and expense** is calculated as the underlying combined ratio (a non-GAAP measure) provided on the schedule "Auto Profitability Measures by Brand" and "Homeowners Profitability Measures by Brand" multiplied by average premium calculated using annualized GAAP quarterly earned premium, which is annualized (multiplied by 4), provided on the schedule "Auto Profitability Measures by Brand" and "Homeowners Profitability Measures by Brand", divided by the policies in force provided on the schedule "Policies in Force" ("average premium"). We believe that this measure is useful to investors and it is used by management for the same reasons noted above for the underlying combined ratio. The results of these calculations are provided on the schedule "Allstate Brand Statistics".

## Definitions of Non-GAAP Measures (continued)

**Underlying loss ratio** is a non-GAAP ratio, which is computed as the difference between three GAAP operating ratios: the loss ratio, the effect of catastrophes on the combined ratio and the effect of prior year non-catastrophe reserve reestimates on the combined ratio. We believe that this ratio is useful to investors and it is used by management to reveal the trends that may be obscured by catastrophe losses and prior year reserve reestimates. Catastrophe losses cause our loss trends to vary significantly between periods as a result of their incidence of occurrence and magnitude, and can have a significant impact on the combined ratio. Prior year reserve reestimates are caused by unexpected loss development on historical reserves. We believe it is useful for investors to evaluate these components separately and in the aggregate when reviewing our underwriting performance. The most directly comparable GAAP measure is the loss ratio. The underlying loss ratio should not be considered a substitute for the loss ratio and does not reflect the overall loss ratio of our business. A reconciliation of underlying loss ratio is provided in the schedules "Property-Liability Results", "Allstate Brand Profitability Measures", "Esurance Brand Profitability Measures and Statistics", "Encompass Brand Profitability Measures and Statistics", "Auto Profitability Measures by Brand", "Homeowners Profitability Measures by Brand" and "Other Personal Lines Profitability Measures by Brand".

**Adjusted net income return on common shareholders' equity** is a ratio that uses a non-GAAP measure. It is calculated by dividing the rolling 12-month adjusted net income by the average of common shareholders' equity at the beginning and at the end of the 12-months, after excluding the effect of unrealized net capital gains and losses. Return on common shareholders' equity is the most directly comparable GAAP measure. We use adjusted net income as the numerator for the same reasons we use adjusted net income, as discussed previously. We use average common shareholders' equity excluding the effect of unrealized net capital gains and losses for the denominator as a representation of common shareholders' equity primarily attributable to the Company's earned and realized business operations because it eliminates the effect of items that are unrealized and vary significantly between periods due to external economic developments such as capital market conditions like changes in equity prices and interest rates, the amount and timing of which are unrelated to the insurance underwriting process. We use it to supplement our evaluation of net income applicable to common shareholders and return on common shareholders' equity because it excludes the effect of items that tend to be highly variable from period to period. We believe that this measure is useful to investors and that it provides a valuable tool for investors when considered along with return on common shareholders' equity because it eliminates the after-tax effects of realized and unrealized net capital gains and losses that can fluctuate significantly from period to period and that are driven by economic developments, the magnitude and timing of which are generally not influenced by management. In addition, it eliminates non-recurring items that are not indicative of our ongoing business or economic trends. A byproduct of excluding the items noted above to determine adjusted net income return on common shareholders' equity from return on common shareholders' equity is the transparency and understanding of their significance to return on common shareholders' equity variability and profitability while recognizing these or similar items may recur in subsequent periods. We use adjusted measures of adjusted net income return on common shareholders' equity in incentive compensation. Therefore, we believe it is useful for investors to have adjusted net income return on common shareholders' equity and return on common shareholders' equity when evaluating our performance. We note that investors, financial analysts, financial and business media organizations and rating agencies utilize adjusted net income return on common shareholders' equity results in their evaluation of our and our industry's financial performance and in their investment decisions, recommendations and communications as it represents a reliable, representative and consistent measurement of the industry and the company and management's utilization of capital. Adjusted net income return on common shareholders' equity should not be considered a substitute for return on common shareholders' equity and does not reflect the overall profitability of our business. A reconciliation of return on common shareholders' equity and adjusted net income return on common shareholders' equity can be found in the schedule, "Return on Common Shareholders' Equity".

**Adjusted net income return on adjusted equity** is a ratio that uses a non-GAAP measure. It is calculated by dividing the rolling 12-month adjusted net income by the average of equity at the beginning and at the end of the 12-months, after excluding the effect of unrealized net capital gains and losses and goodwill. Return on equity is the most directly comparable GAAP measure. We use average equity excluding the effect of unrealized net capital gains and losses and goodwill for the denominator as a representation of equity primarily attributable to the Company's earned and realized business operations. Unrealized net capital gains and losses are excluded because they vary significantly between periods due to external economic developments such as capital market conditions like changes in equity prices and interest rates, the amount and timing of which are unrelated to the insurance underwriting process. Goodwill is excluded because it relates to the acquisition purchase price and is not indicative of our underlying business results. We believe it is useful for investors to have adjusted net income return on adjusted equity when evaluating our performance as it represents a reliable, representative and consistent measurement of the company and management's utilization of capital. Adjusted net income return on adjusted equity should not be considered a substitute for return on equity and does not reflect the overall profitability of our business. A reconciliation of return on equity and adjusted net income return on adjusted equity can be found in the schedules, "Allstate Life Return on Equity", "Allstate Benefits Return on Equity" and "Allstate Annuities Return on Equity".

**Book value per common share, excluding the impact of unrealized net capital gains and losses on fixed income securities**, is a ratio that uses a non-GAAP measure. It is calculated by dividing common shareholders' equity after excluding the impact of unrealized net capital gains and losses on fixed income securities and related DAC, DSI and life insurance reserves by total common shares outstanding plus dilutive potential common shares outstanding. We use the trend in book value per common share, excluding the impact of unrealized net capital gains and losses on fixed income securities, in conjunction with book value per common share to identify and analyze the change in net worth attributable to management efforts between periods. We believe the non-GAAP ratio is useful to investors because it eliminates the effect of items that can fluctuate significantly from period to period and are generally driven by economic developments, primarily capital market conditions, the magnitude and timing of which are generally not influenced by management, and we believe it enhances understanding and comparability of performance by highlighting underlying business activity and profitability drivers. We note that book value per common share, excluding the impact of unrealized net capital gains and losses on fixed income securities, is a measure commonly used by insurance investors as a valuation technique. Book value per common share is the most directly comparable GAAP measure. Book value per common share, excluding the impact of unrealized net capital gains and losses on fixed income securities, should not be considered a substitute for book value per common share, and does not reflect the recorded net worth of our business. A reconciliation of book value per common share, excluding the impact of unrealized net capital gains on fixed income securities, and book value per common share can be found in the schedule, "Book Value per Common Share".
